

## Summary: Real Anthony Fauci:[Robert F. Kennedy](#)

### INTRODUCTION

In 2020, democracy worldwide effectively died thanks to the likes of Dr. Fauci. Shell-shocked and stunned, citizens of Western countries suffered the tried-and-true methods of deception and dictatorship-building tactics. Dr. Anthony Fauci was the one who sold the house and kicked the American family into the streets.

Kennedy said the American public health system had been historically closely associated with his family, so he bears extra responsibility for righting wrongs.

Kennedy watched while the industry, which was supposed to be regulated, used its power on Capitol Hill as indentured servants to nibble away at government agencies. As a result, Congress has created puppets for the health care and pharmaceutical sectors.

Bob Greene has fought the US Environmental Protection Agency for four decades to expose the Environmental Protection Agency (EPA) and other environmental agencies and fix the crooked sweetheart arrangements that frequently jeopardize regulators. They were in cahoots with the polluting industries they were supposed to be policing. Organizations could capture regulatory information more quickly with the web of entanglements between the pharmaceutical industry and the government's healthcare system. Anthony Fauci was at the center of an unprecedented global drama. During the COVID-19 pandemic of 2020, human history was rewritten. The startling tale here has never been told, and those in authority have sought to keep it hidden. To keep the public clueless, they worked around the clock using the media in their favor. Fauci is on television saying COVID would not be a problem for the United States, yet it was portrayed as its biggest problem.

Anthony Fauci comes across as calm, authoritative, and courteous. For the COVID-19 crisis, he had a Prozac-like disposition. On the White House stage, he became a trusted and steady presence. Democrats and idealistic liberals alike among his supporters. Tony Fauci's charisma and authoritative tone drew a lot of attention. He had a lot of fans, but not everyone liked him. Frita Ghitas is one who spoke out against him. Dissenters were subjected to a grueling inquisition as well as their canonization. Frida Ghitas says that science thrives on skepticism of conventional wisdom. Anthony Fauci has direct and indirect control over 57 percent of the global pharmaceutical market. He enjoyed this amount of admiration because of his biomedical research funding. He had the power to mold and manage the environment, dominating global medical narratives and supporting the notion that he is the personification of science. Tony Fauci's work is important for public health and democracy. The results of his 50-year leadership have been terrible. His handling of the COVID crisis and medications turned out to be nothing short of a disaster. According to the studies, life expectancy has been cut by 1.9 years

due to other factors than Covid 19. Unemployment postponed medical care and other issues. Sadness, obesity, stress, overdoses, suicide, addiction, and alcoholism attacked Americans. Millions of individuals have died as a result of accidents. As a result of quarantines, there have been many deaths. This is an increase of 8.5 times the average decline over 16 months. There hasn't been another dip of that magnitude since World War II. Hunger, poverty, and food insecurity claimed the lives of three hundred million people. By 2020, Asia would have lost 228,000 children due to health and education issues, including services related to poor nutrition. Unemployment shock is expected to occur over the next 15 years. Another 890,000 people are expected to perish. The mental health of adolescents and young adults has deteriorated. Overdoses from synthetic opioids have increased by 38.4 percent. In the United States, people consider suicide to deal with their problems. The economy is being destroyed while wealth is being transferred upward. Anthony Fauci, Big Pharma, and the Deep State were the mastermind behind the planned economic collapse of the United States. Amid the COVID pandemic, the once-thriving economic engine of the country is now dormant. The results of the New Deal are now being felt as authorities have worked for the government's liquidation.

### The Enrichment of the Wealthy

The closures of businesses destroyed America's middle class. This resulted in the world's greatest wealth transfer from the middle class to the elite. The behemoths of Big Data, Big Telecom, Big Finance, and Big Media emerged as the winners. The United States of America's democracy was rapidly shattered. All official pronouncements were turned into a surveillance police state by robber barons. These corporations bolstered the robbers while all resistance was suppressed. Facebook's Mark Zuckerberg fortune climbed by \$41 billion, and Sergey Brin's fortune increased by \$35 billion. The value of Jeff Bezos' fortune rose by \$86 billion. Ellison, Gates, and others took advantage of the closure to get things done faster. Satellites, antennae, and biometrics were developed as part of their 5G network. They and their associates used facial recognition and track-and-trace technology.

Allies in the government and spy agencies utilized our data to mine and profit from it. We crowded together in fear of a flu-like pandemic while the outlaws like Black Live Matter and Antifa roamed free. Our democracy, civil rights, country, and way of life were taken away by gangland tactics. Moreover, we were assured that it would only be for 15 days, perhaps 15 months, or whatever time that turned out to be an intentional underestimate. We must examine the data. Failing throughout Dr. Anthony's tenure at the NIAID, the public's health has deteriorated dramatically. Fauci's fifty-year tenure as Director resulted in the sickest generation in the history of the United States. The healthcare system in the United States is a mess. Allergies, autoimmune diseases, and chronic ailments currently impact 54 percent of the population. In 1984, the National Institute of Allergy and Infectious Diseases was established, and approximately 80 autoimmune diseases were unknown 1984, including diabetes in children and rheumatoid arthritis in adults. Following the government's offer of immunity to vaccine manufacturers, in the late 1980s, 170 ailments swept over the country.

We got more food products laden with high fructose corn syrup and processing in general. PFOA flame retardants were added to more products.

Tony Fauci has shown little interest in investing in essential infrastructure. To solve these difficulties, more study was needed, not less. The failure of Dr. Anthony Fauci to accomplish public health goals during the Covid epidemic is not a one-off occurrence but rather part of a planned pattern of putting people in danger.

Pharmaceuticals have put public health and safety on the back burner of profits and self-interest. Thousands of Black people were killed. Hispanic orphans and foster children who had been subjected to cruel treatment, including medical experiments that sometimes turned fatal. Anthony Fauci's career of deception paid off for big business. To promote new vaccines, treatments, and pharmaceuticals, pandemics were conjured up at will. Kennedy wrote this book to help Americans understand Dr. Fauci and how sinister pharmaceutical companies developed complete control over our lives and government.

## CHAPTER ONE

### Planned Pandemic Mismanagement

San Francisco would be devastated by a hundred fires and earthquakes in its civic history. According to Thomas Jefferson, San Francisco was cursed. Fauci also took a keen interest in New York City, saying he loved the city but helped kill many patients in overcrowded nursing homes. His policies initially helped spread the disease worldwide, like saying it was all right to ride the subways when, in fact, it was the worst thing one could do. Dr. Anthony Fauci's strategy of managing the COVID-19 pandemic was against logical science. Masking, social separation, and quarantining healthy persons were all required. Lockdowns are what they're called, supposedly a way of preventing the spread of infectious disease, resulting in an outbreak that had never happened like this before. All of his suggestions were backed by dubious evidence, evidence allegedly based on science but instead on profit. The COVID policies of Dr. Anthony Fauci were obscenely awful. They were so ill-conceived and scientifically flawed that thousands of people died from them. Thousands of deaths could have been avoided.

Quarantines, masking in a peer-reviewed study, and social distancing garnered only intermittent support and success. Ordinary masking (using a respirator that isn't an N95 had no effect. According to fifty-two studies, viral infection rates were on the rise. The scholarly literature has always been against hiding the healthy. The transition of Dr. Anthony Fauci Format, a period when political divisions were high, switching from opposing masks to favoring them was a smart move for spreading the pandemic. It had reached an all-time high. Rather than a virus, the public was vaccinated against critical thinking about masking.

According to Guetta, this was accomplished by heightening everyone's fear. Masking's psychological impact reminded him of Duck-and-Cover drills from his boyhood. McNamara's actions aided the cause. "National Mass Psychosis," he called it. He claims that healthy people are happier. Lockdowns were so unusual that WHO pandemic guidelines warned against them. Stop using lockdown as a primary method of containment, said the WHO. Dr. Anthony claimed that lockdowns have only one effect that should never be overlooked: making people feel unsafe. Making the impoverished increasingly poorer was the plan. It turns out that infection rates were unaffected by lockdowns that created a fear of safety.

### Lies and False Information

Vaccinations against COVID for previously infected Americans. A year of regulatory compliance Malfeasance culminated in blatant data fabrication. Anthony used wildly inaccurate modeling, which resulted in a 525 percent error rate. Deaths in the United States were in excess. Only 6% of COVID deaths occurred in people who were pregnant. Only 6% of the pregnant suffered mobility. The remaining 94% had an average of 3.8 potentially fatal comorbidities.

Fauci's refusal to remedy the problem was inexcusable negligence. The Department of Health and Human Services (HHS) vaccination surveillance system is flawed. The general populace was never informed properly. Information on infection fatality rates or

COVID hazards based on age never made it to the public's ear. That would have allowed them and their doctors to make evidence-based risk assessments.

Expert Opinion: President Joe Biden is among Dr. Anthony Fauci's supporters. Urged people in the United States to trust experts. This type of advice is anti-scientific, as well as anti-democratic. Science is dynamic, and experts' opinions may change over time due to political, power, and economic forces. Anthony Fauci's obsession with cutting-edge mRNA vaccines like Gilead's expensive proprietary antiviral, remdesivir, caused him to overlook or even reject cheaper alternatives proven effective. Hundreds of thousands of people have died due to suppressing successful early medicines, resulting in unnecessary deaths and extending the epidemic.

### Strengthening Immune Systems

Because of Anthony, Americans gained an average of two pounds every month. Fauci's COVID-19 lockdowns were reduced by 27%, as were their daily walks. On-vaccine health therapies, such as Vitamin D, were prescribed by doctors. Canadians threatened to revoke their licenses.' Anthony Fauci's claim that humans are incapable of combating COVID-19It's complete nonsense if you don't have a vaccine. Healthy people have a low risk of getting sick. According to the Centers for Disease Control and Prevention (CDC) and the World Health Organization (WHO), COVID, as well as all other international health organizations, Treatment should begin as soon as possible. Anthony Fauci's techniques ignored and suppressed the early warning signs. Infected individuals who were frequently afraid were treated. You can't stop a global viral epidemic from spreading, but you can slow it down to make it less hazardous. Hundreds of thousands of people could have died due to this error. McCullough's early studies on COVID-19 treatment have been retained. According to McCullough, early treatment could help. Instead, Fauci and his teams said to wait. Nearly 80% of COVID-related deaths may have been averted. Dr. McCullough is an expert in his field. These medicines were used to treat roughly 2,000 COVID patients. Pierre Kory, a pulmonologist and expert in critical care, agrees. McCullough's opinion: Taking action within a week after being aware of the problem. The virus prevents itself from reproducing. He claims that in the spring of 2020, we might have been able to stop the pandemic in its tracks. Hundreds of scientists and physicians, including Drs. Resch, McCullough, and Johnson participated in the study. Dr. Fauci made no effort to locate repurposed medications, causing many doctors to be displeased with the lack of consultation with the treating physician. Professionals. Dr. McCullough believes that Dr. Fauci should have created an advisory board. The world's eleven million people are connected through an international communications network of physicians specializing in primary care. According to Dr. Kory, hospitalizations are a common occurrence. According to Drs, this was an unintended outcome that should have been avoided. McCullough and Resch, the National Institutes of Health (NIH) should have established field clinics and ambulatory treatment facilities that specialize in the COVID treatment for those who are asymptomatic or in the early stages. The goals were self-evident. They wanted to avoid hospitalizations and deaths, which was obvious. McCullough suggested that we should have had a set of facts and figures. Centers of communication were treating physicians, and hospitals could communicate current data

bulletins were a necessity. They were out of luck if they sought to treat infected individuals as quickly as possible. According to Dr. Resch, in nursing Homes and Quarantine Facilities, Public health officials should have verified that patients above the age of sixty-five were kept in quarantine facilities until they were no longer dangerous. That ill patient who s should have had access to quarantine facilities and would not have been forced to live in overcrowded nursing homes. Fauci should have supplied monoclonal antibodies to those who needed them; withholding them condemned people to death.

Quarantine facilities and nursing homes.

Rather, he sabotaged the delivery of monoclonal antibodies to these hospitals. These doctors stepped into the vacuum left by government agencies. Early in the pandemic, various pandemic centers developed repurposed treatments with medications. Their ability to treat COVID turned them against the government. Anthony's decision to deny sick Americans early care was not simply a political choice but also a moral one. It was also "cruelty," according to McCullough, because it was a bad public health approach. "On a local level," for someone infected, according to Dr. McCullough, it takes around two weeks for COVID to make you sick enough to go to the doctor, which necessitates admission to a hospital. We would have been in serious trouble if it had been any other pneumonia. Would understand that catching it early makes it much easier to treat. For up to two weeks, the virus might have been increasing, causing a lot of swelling and blood clotting. The doctors knew that treating this ailment with a single medication would be ineffective. Currently, they've produced three guidelines. The following was the step strategy: medicines are used to slow down the virus, and medications can be used to lessen or eliminate inflammation. According to McCullough, this is a blazing pace. HHS research has been funded since 2005 and established the efficacy of hydroxychloroquine (HCQ) against Coronavirus. By March of 2020, clinicians from New York to Asia were putting it to good use. COVID is a virus susceptible to Celebrex, azithromycin or doxycycline, zinc, and certain vitamins. Medications used included bromhexine, NAC, IV vitamin C, and quercetin. According to McCullough, they had a lot of data on ivermectin from Bangladesh and other countries. McCullough found he could use nasal rinses and dilute veridical drugs to treat his symptoms. Patients were given prophylactic antibiotics to reduce virus load and prevent transmission. In Asian countries, saline nasal lavages were used to reduce viral loads and transmission and were employed to stunning effect. Researchers at NYU could use HBOT to remove patients from ventilators and promptly recover 18 of 20 ventilator cases during April and May.

Hydroxychloroquine kills.

Most of my Democratic colleagues know that Dr. Fauci led an attempt to overthrow the current administration. To prevent Am Toicans from receiving life-saving treatments and medicines. Hundreds of thousands of lives may have been saved. The 7-year death toll could have been dramatically reduced.

The duration of the epidemic

Former Congressman Steve Israel claims that no other aspect of the COVID circumstance shows one more. Dr. Anthony Fauci has placed the evil intentions of a strong, powerful ion cartel. The government has invested \$6 billion in the Moderna vaccine alone, and the patent belongs to the agency, which stands to profit handsomely from royalties. President Trump's support for HCQ on March 19, 2020, made the issue hyper-politicized. Dr. Fauci's led an anti-HCQ slander campaign. Democrats and the media were divided on this issue. HCQ, on the other hand, according to John Sutter, has a long history of safe medicinal use that politics and the media misinformation have overlooked. The Efficacy of the HCG Protocol for Early Intervention Against Coronavirus in combination with zinc and Zithromax, hydroxychloroquine (HCQ) is used to treat malaria. Effective in the fight against Coronavirus, especially when administered as a preventative measure or in the early stages of the sickness, HCQ is both safe and effective. More than two hundred peer-reviewed studies by the government have shown that it is effective against Coronavirus and unaffiliated researchers. In 2004, Belgian researchers discovered that Chloroquineeffectively kills viruses at levels comparable to those used in clinical trials. Safe doses were used to treat malaria. This discovery was quite alarming. Because the vaccination worked as both a prophylactic and a curative measure, it was a boon to vaccine developers. An antidote for Stars The Pharmaceutical Industry's War on Catha concept of an already available pharmaceutical medicine (with an expired patent)outperforming any COVID vaccination presented a serious hazard to the vaccine's effectiveness. Officials from the French Ministry of Health quietly announced in January 2020 that thatch had been upgraded to a List II dangerous chemical, making its sale illegal. South Africa has launched an investigation into an alleged violation of import laws. In late 2020, two tons of life-saving hydroxychloroquine were destroyed. Because it was illegally imported, the US government ordered its destruction. In 2021, roughly 1,000 pounds of Huq will be produced. False studies in the industry There had never been a single study that supported the theory before COVID-19. Due to safety concerns, HCQ is not used. Dr. Fauci, Bill Gates, and his pharmaceutical company Allies enlisted the assistance of an army of industry-connected researchers to support them. Create fictitious evidence of the dangers. Rather than using traditional treatment methods, The 17 WHO investigations employed a borderline fatal dose of 400 mg per day. The daily dose begins at 2,400 mg on Day 1 and gradually lowers to 800 mg each day the following day.
